Blog Project Tasks.md 3/29/2022

## **Blog Project Tasks**

## 1. Create VPC and all components

- Create VPC
- Create Subnets
- Create and attach an internet gateway
- Create Route Tables
- Create Endpoint

## 2. Create Security Groups (ALB ---> EC2 ---> RDS)

- ALB Security Group
- EC2 Security Groups
- RDS Security Groups
- NAT Instance Security Group

## 3. Create RDS

- Create a subnet group for our custom VPC
- o Create Database
- 4. Create two S3 Buckets and set one of these as static website.

Blog Project Tasks.md 3/29/2022

- Failover Scenario
- o Web Site
- 5. Copy files downloaded or cloned from Techproeducation repo on Github
- 6. Prepair your Github repository
- 7. Prepare a userdata to be utilized in Launch Template
- 8. Write RDS database endpoint and S3 Bucket name in settings file given by Developer and push your application into your own repo on Github
- 9. Create NAT Instance in Public Subnet
- 10. Create Launch Template and IAM role for it
- 11. Create certification for secure connection
- 12. Create ALB and Target Group
- 13. Create Autoscaling Group with Launch Template
- 14. Create Cloudfront in front of ALB
- 15. Create Route 53 with Failover settings
- 16. Create DynamoDB Table
- 17. Create Lambda function
- 18. Create S3 Event and set it as trigger for Lambda Function
